

lowering the visibility of a display portion of the display screen. The brightness of the display color of either the background portion 31 on a display screen 30 or the background portion 31 of such one of display portions 32 and 33 as occupies the larger area of the lit portion of the display screen 30 is changed according to the control of a control switch 23. If the brightness of the display color of the background portion 31 is lowered (from the "thin light blue" to the "thick light blue", for example) at the nighttime, its reflection on the glass around a cabin 40 can be reduced without lowering the luminance of the display screen 30. Alternatively, the saturation or hue of the display color can be changed to obtain a similar effect.--

IN THE SPECIFICATION:

Please replace the two paragraphs beginning at page 4, line 4, with the following single rewritten paragraph:

--According to a first aspect of the invention, there is provided a display device disposed in a cabin of a construction machine and comprising: a background portion, a display portion on a display screen, and --.

Please replace the two paragraphs beginning at page 7, line 17, with the following single rewritten paragraph:

--According to a fifth aspect of the invention, there is provided a display device disposed in a cabin of a construction machine and comprising: a background portion, a display portion on a display screen, and --.
